

HIGH VOLTAGE MULTILAYER CERAMIC CAPACITORS

DESCRIPTION:

RoHS compliant (*)

Capacitors 0805 to 6560

Rated voltage 1000V to 10KV

Dielectric Type I and II

SMD and leaded versions

** Non RoHS version still maintained for current applications.*

I. Foreword

The High voltage series is intended for such typical application as high voltage power supplies and high voltage multiplier circuits. Available in bare chips, they can be used in surface mounting or hybrid circuit applications. Their multilayer construction offers significant size and space saving advantage. Combination of standard case sizes may be obtained for special applications. They are suited for use in commercial, industrial and High-Rel military circuits.

II. Description

The capacitors here mentioned concern the voltage equal or higher than 1KV, in bare chips or leaded devices. The dielectrics used are from 2 types: ultra stable NP0 and X7R dielectrics.

Bare chips:

Radial leaded devices:

The standard wires are straight but on special request they can be bended to meet customer specification. Ask us for specific demand!

VII. Electrical characteristics

The ESR (Equivalent Serial Resistance) curves are given here for SMD (chips) capacitors. Regarding the curves for the leaded capacitors, they are rather the same.

Indeed, due to the resistivity of the raw material used and the wire diameters, the resistance of the wires is much lower than the ESR of the chips. So, in a first approach, their influence can be considered as negligible.

These typical curves are an example of admissible currents for one family of chip capacitors. For other curves and products or for further information, please contact us.

Note: for the calculations, we have considered that the terminations are directly connected to an infinite heat sink. In other words, the thermal resistance of the circuit itself which depends of its type and design has not been taken into account. Moreover, the ambient temperature taken is 25°C.

IX. Special products

As standard products can't meet all the specificities of all applications, special applications may require special features (higher voltage, burn-in, dimensions, coating, leading, marking...) not described in this catalogue.

Based on the “state of the Art”, and our knowledge of the technology, our Engineers may study at your request all special components to meet your application.
Please, consult us for more information.

(*): capacitance values lower than 10pF, tolerances A, B, C and D apply. For capacitance values equal or higher than 10pF, tolerances F, G, J and K apply.

(**): For "Radial Leaded (R)" capacitors, both RoHS and non-RoHS versions exist. This is due to the wishes of some customers who still need non-RoHS components in their applications. This suffix must be required for RoHS compliance.

For "P", "A" and "S" terminations, only the RoHS version exists. The RoHS suffix can be added for information.

XI. Packaging

According to their dimensions, the components can be delivered in tape or individually protected in “blister” boxes. Please, refer to the following table:

Tape and reel (SMD components):

Case size	Qty per reel *	Tape type
0805 R15	3000 4000	8mm
1206 R18	3000 4000	8mm
1210 S41	2000 4000	8mm
1812 S43	500 1000	12mm
2220 S47	500 1000	12mm
H1515	500	12mm
H2020	500 1000	12mm
H2520	400	12mm

* Depending upon the thickness of the components, please consult us.

Dimensions diameter reel (in mm)

Tape type: 8mm

Tape type: 12mm

Regarding the reels and tape dimensions, they are compliant to the IEC 60286 3 standard.

“Blister” Boxes (SMD and leaded components):

Case sizes for 1515 and above can be delivered with plastic “blister” boxes especially designed to protect the components which could be large and quite heavy. Depending upon the termination (with or without connection) and the size, the number of the parts in each box is defined. Please, consult us for more details.
