Built-to-print Rotors and Stators manufacturing

- Stators diameter from 10 to 500mm and weight up to 250Kg
- Up to high temperature 220°C products:
- Raw Material
- Impregnation Process
- Therma securities
- Class F or H insulation
- compactness of th stator windings
- stator winding overmolded

Operations

Design and manufacturing of the specific armature tools Armatures or stator stacks gluing under pressure and varnishing laminations on stacking fixtures.

Sets of coil winding operations

- 4. Slot insulation positioning, winding insertion into the armature slot, cutting down and folding slot insulation and inserting wedges as each slot is filled.
- 5. Cabling of leadwire with Teflon isolated and flexible sleeve wire, inter-connection of several windings
- 6. Windings binding and forming against final mechanical dimensions Securing position with lancing tape
- External rectifying of rotor stacks, internal eroding of stator stacks, notchmilling, boring
 Assembling of the collector and cabling of the winding wires
- 9. Stator overmoulding with epoxy resins
